

Second Workshop on Usable Privacy & Security for Mobile Devices (U-PriSM 2)

August 27, 2013 Munich, Germany

<http://www.mobilehci2013.org/workshops.php#ws7>

CALL FOR PARTICIPATION

The 2nd Usable Privacy and Security of Mobile Devices Workshop (U-PriSM 2) is an opportunity for researchers and practitioners to discuss research challenges and experiences around the usable privacy and security of mobile devices (smart phones and tablets).

SCOPE & FOCUS

The workshop, which is co-located with MobileHCI 2013 (<http://www.mobilehci2013.org/>), seeks two types of original submissions: (1) short papers describing new research outcomes and (2) position papers describing new research challenges and worthy topics to discuss in all areas of usable privacy and security of mobile devices. Topics may include (but are not limited to):

- User authentication on mobile devices
- Permission management for applications
- Secure mobile payment
- Security indicators and features for mobile web browsing
- Do-not-track on mobile devices
- Protecting location privacy of mobile users
- Physical security of mobile devices (against loss or theft)
- New security or privacy functionality and design for mobile devices
- User testing of mobile security or privacy features
- Lessons learned from deployment of mobile security or privacy features
- Comparisons of usable privacy or security features between mobile platforms

We solicit papers describing research results, work in progress, and practitioner/industry or experience reports focused on any workshop topic. Papers should describe the purpose and goals of the work, cite related work, and clearly state the (expected) contributions to the field (innovation, lessons learned).

We also encourage 2-4 page position papers presenting an arguable opinion about an issue. Position papers that present speculative or creative out-of-the-box ideas are welcome and encouraged. While completed work is not required, position papers should still provide reasonable evidence to support their claims.

The full-day workshop will be divided into several sessions consisting of brief presentations followed by group discussion and feedback from the audience. Presentations and themes will be chosen from among the submissions received, with the intention of including those that have higher potential for interactive discussion and participation from the audience. At least one author of accepted papers needs to register for the workshop and for the conference itself.

SUBMISSIONS

We invite authors to submit the following types of papers:

Short papers: Submissions of 2 to 4 pages in length, excluding references and appendices. The papers should be self-contained without requiring that readers also read the appendices. The words [Short Paper] should precede the paper title.

Position papers: Submissions of 2 to 4 pages in length, excluding references and appendices. The paper should present an arguable opinion about an issue surrounding the workshop topics. The words [Position Paper] should precede the paper title.

Papers should be submitted in ACM 2-column archival format via the electronic submission system and should NOT be anonymized. Papers will be peer-reviewed and will optionally be made available on the workshop website. Authors may choose to have only an abstract made publicly available on the web, especially for work-in-progress that will eventually be published elsewhere. The best paper, as chosen by the organizers, will be included in a Special Issue of the International Journal of Mobile HCI (IJMHCI).

IMPORTANT DATES

Paper submission deadline: May 10, 2013 5pm PST
Notification of position paper acceptance: June 10, 2013
Final papers for website due: July 10, 2013 5pm PST
